In experiments the effects of the latensification were
reflected to a greater extent when the developing time
is shorter. This is probably a characteristics of the
latensification by a solution of metal salts. The effects
of the latensification are decreased when the develop-
ing time is prolonged. in the case of latensification by
metal salts. The reason lies in the fact that the latent

The study was conducted as proof of the effect of
ammonia in the ammonia-pressurization method.
First, dicyandiamide was fused into a thin layer at
213°C in order to avoid the accumulation of reaction
heat, and by analysing the composition of the reac-
